

CLIENT CASE STUDY

End-to-End Solutions for Critical H1N1 Vaccine Deliveries

The Challenge

Partner with 3PL client to orchestrate the critical delivery of millions of doses of temperature-sensitive vaccine to key locations and waiting patients around the world. Without a baseline, there were unique logistical challenges in creating the best cold chain system to ensure product integrity.

The Solution

Cold Chain Technologies (CCT) evaluated the 3PLs complex distribution needs and partnered with them to provide a tailored custom thermal shipper design, qualification, inventory management, training, and auditing solution.

The Details

CCT's Sales Engineer, TJ Rizzo, along with Cold Chain's design, testing, and logistics specialists spent months collaborating to create a fail-safe network with just-in-time delivery. Customer service for this 3PL meant one-on-one support every day, in every aspect of cold chain management.

The Future

Rizzo and his team are constantly evaluating the 3PL's volumes, distribution channel, ambient temperature profiles, and performance. Adding new solutions and optimizing others is an on-going process. By constantly working to further reduce packaging costs, and analyze options for more efficient freight routes, CCT is always watching both product integrity, and the bottom line of the client.
