

CLIENT CASE STUDY

Mail Order Pharmacy Direct-to-Patient System

The Challenge

Create a system to safely deliver temperature sensitive drugs - and other products – to mail order patients in distinct locations throughout the U.S.

The Solution

With attention to cost and product integrity, Cold Chain Technologies (CCT) developed a system to optimize this large mail order pharmacy's cold chain distribution shipping network. CCT's engineering staff conducted a complete audit of the pharmacy's current cold chain management process.

The Details

For every step, CCT identified significant improvements that will lower cost and better maintain the integrity of the temperature sensitive drugs. By reducing the number of designs and quantity of gel packs, CCT's recommendations will dramatically lower material, labor, and shipping costs.

The Future

With the help of CCT, this major mail order pharmacy is poised to ship big volumes, at a lower cost, with complete confidence.
